Federico Martin Molinero

Frontend Developer

Argentina

Summary

Experienced tech professional proficient in full-stack web
development, application support, and user management platforms.
Skilled in front end development building responsive, interactive
designs adhering to web accessibility guidelines.
Proven ability to lead teams and deploy applications on cloud
platforms like Azure and AWS.
Passionate about leveraging technology to drive innovation and
enhance user experiences.

Experience

Globant
Web User Interface Developer
June 2019 - September 2023 (4 years 4 months)
Rosario, Santa Fe, Argentina

Full-stack web development, application support, and user management
platforms.

UI design and development following custom models, with a focus on building
responsive, interactive designs adhering to web accessibility guidelines.
Implementing and maintaining scalable and performant Angular-based
frontends, utilizing web technologies and agile methodologies with distributed
teams globally.

APIs interacting, conducting research for new development solutions, and
contributing to collaborative software development.
Providing support in application development and bug-fixing.

At Globant, I had the privilege of serving esteemed global enterprises,
including leading firms such as EY and PwC. I crafted innovative, bespoke
solutions tailored to meet their unique needs, contributing to their business
success in a dynamic and competitive landscape

Accenture
Data Engineering Analyst
June 2018 - June 2019 (1 year 1 month)
Rosario, Santa Fe, Argentina

I played a key role in the development, implementation, and maintenance of applications, employing agile methodologies and collaborating closely with globally distributed teams.

My tasks included optimizing databases with large data volumes and tailoring stored procedures. I showcased strong analytical skills in dissecting project requirements, resulting in the creation of web applications with interactive interfaces and responsive designs, thus enhancing user experiences.

Furthermore, I led initiatives to improve performance across various areas, including software architecture, APIs, and web services.

MundoIT
Implementation Analyst
June 2016 - November 2017 (1 year 6 months)
Rosario, Santa Fe, Argentina

Specialized in programming, development, and technical support for applications utilizing web technologies.

Conducted thorough functional analyses to understand requirements. Oversaw the normalization of complex data, managed database migrations, and handled modifications and maintenance.

Ensured comprehensive documentation and monitored version control to track changes effectively

Superintendencia de Riesgos del Trabajo (MTESS)
Fullstack Developer
May 2014 - April 2016 (2 years)
Rosario, Santa Fe, Argentina

I played a central role in the entire lifecycle of project, from analysis and design to programming, modification, and testing of application, user interfaces, ABM, widgets, statistics and documentation.

Additionally, I standardized complex information, managed databases, and developed calculation procedures. I handled platform administration, user permissions, and roles.

Notably, I showcased my capacity to initiate projects from inception, exemplified by leading the development of a nationwide software solution for statistical analysis and issue tracking in the workplace.

IRSA CORPORATION
SysAdmin
August 2011 - September 2013 (2 years 2 months)
Santa Fe Province, Argentina

I managed the installation, maintenance, configuration, and control of workstations and devices, including hardware enhancements.

Additionally, I administered applications and user accounts for shopping centers, overseeing system implementations across various international locations.

My responsibilities encompassed incident logging, inventory management, backups, and Data Center oversight. I provided telephone and remote support to customers, ensuring seamless assistance and resolution of technical issues.
